

Integrative Holistic Posology

Guiding Principle:

What is true for one part of the system is true for other parts of the same system. Find the person's individualistic expression at the whole level.

3 PRINCIPLES

1 The higher is the level of the person's level of experience*, the higher the potency** he needs.

2 Select a potency to meet the individual's level of experience (i.e. where he is living his life at a given moment in time and according to how he speaks spontaneously, without guidance, till the end of Passive Case Witnessing).

3 Select a posology group based on whether a person's spontaneous experience is general or local.

POTENCY SELECTION

If the Person's SPONTANEOUS*** level of experience of his symptoms is...

HOLISTIC – experienced at every level, IRRESPECTIVE OF PATHOLOGY

Select **30C-MM** potencies according to his level of experience:

30C: Fact / name of disease

200C: Emotion / situation / day to day

1M: Delusion / PQRS / individualistic symptoms "As if"

10M: A clear holistic theme / energy pattern runs through the mind and body. (Sensation level)

50M: A clear holistic theme / energy pattern / sensation runs through mind and body at the NON-VERBAL level.

CM: A clear holistic theme with a single SOURCE emerging either verbally or non-verbally.

MM: The person experiences the whole energy of a single source pattern and also witnesses his experience from a THIRD-PERSON PERSPECTIVE.

LOCAL or one-sided AND...

The Disease is functional & reversible

Select **MT-12C** potencies according to his level of experience:

MT: Name of disease / fact

1 - 3C: Factual Symptom

4 - 6C: Feeling

7 - 9C: Delusion

10 - 12C: Sensation, with energy pattern and the source.

The Disease is irreversible, deep & destructive

Select **LM** potencies according to his level of experience:

LM 1 - 3: Name of disease / fact

LM 4 - 6: Emotion / feeling

LM 7 - 9: Delusion

LM 10 - 12: Energy or Source

*According to the Sensation School, the ascending levels of experience are: name, fact, delusion, sensation and energy. According to Hahnemann, symptoms can range from common symptoms, emotions, PQRS or individualizing symptoms to PQRS at the holistic level and the vital force.

**Potentization releases the peculiar characteristics of the substance. The higher the potency, the more peculiar becomes the substance. Hence, the higher the level of experience/sensation or the more peculiar the PQRS, the higher should be the potency.

***Spontaneous: how the person expresses his state/symptomology freely, without being guided by the homeopath.
